

TorchFlame

Instructions

The Objective:

The player wakes up in a dungeon with only a few basic navigation tools. They must find their way out of the dungeon in the most efficient way possible. However, magical fire begins to spread throughout the dungeon, making backtracking very hard.

The Setup:

Click “Play” on the title screen. the player will arrive at a screen with the settings.

Make sure all settings are reset. (The option is located at the very end, so the player need to scroll down).

NOTE: You MAY choose to enable coordinates.

Then click “Play” in the bottom left corner to start the game.

The Game:

With the default settings, the following are always true for any map:

- 1) The player will start at the back right of the dungeon, on the topmost floor.
- 2) The final room is located on the lowest floor, and at the front left of the dungeon.
- 3) There are three floors.
- 4) There will almost always be 2 staircases that connect these three floors (Top-Middle, and Middle-Bottom)
- 5) The player will be safe in the start room, end room, and the staircases.
- 6) The player will be given the same items.

The Torch:

- 1) Irrespective of the settings, the player will always be given an inextinguishable torch.

- 2) The torch will remain lit for the duration of the game.
- 3) Starting from the moment the player enters a room, they have ten seconds to move around the room, walk out of it, or come back to it before the fire starts (with the default settings)
- 4) Despite containing fire, the torch is completely harmless

The Map:

The map displays a bird's-eye view of the dungeon.

- 1) The starting room will be marked by a green triangle at the bottom right.
- 2) The ending room will be marked by a red square at the top left.

- 3) The staircases are marked by blue circles. Their positions are random, and will be different every game.
- 4) Some details such as mountains or rivers do not contribute to the game, and exist for only decoration.
- 5) The black triangle represents the player. It will display the player's position in the dungeon. This will only appear if you have coordinates enabled in the settings.
- 6) The map does not have a compass rose. Read "The Compass" to understand how directions work in this game.
- 7) The colors of each icon will look very different under the light emitted from the torch. While the colors may be unrecognizable, the shapes should suffice when reading the map.
- 8) You do NOT know the floors or orientations of the staircases.

The Compass:

The compass' only function in this game is to tell the player the direction in which they are moving. The display will rotate in a way such that the needle will always point in the player's direction.

How the directions work:

(The left column is the compass, the right column is the map)

North: Up

South: Down

East: Right

West: Left

The Strategy:

You know:

- 1) The start and end locations
- 2) The locations of the staircases
- 3) The direction you are facing
- 4) Where you are on the map (if coordinates are enabled)

You Don't know:

- 1) Which floors the staircases are on
- 2) Where you are on the map (if coordinates are disabled)

NOTE: If you disable the map and the compass, you will not know anything about the map.

- 1) Make a plan: look through the doorway in the starting room to see which ways you will can go (either forward, left, or sometimes both)
- 2) If you are facing a large hallway, you should try to walk down, looking for junctions that bring you closer to staircases.
- 3) If you can't see any large hallway from step 1, pick a direction. Choose a staircase to target (usually the closest one) and move toward it.
- 4) Keep trying to pick doorways that lead to the staircase.
- 5) If there are very few hallways that lead to your chosen staircase, it is likely not on your current floor. Try to backtrack and walk toward a different one.
- 6) Staircases may generate in different orientations, so you may need to walk around the area for some time to check if it exists in your level.
- 7) Take a deep breath: If you locate a staircase, walk into the room. Fire cannot spread here, so you can formulate a new plan.
- 8) If you're on the final floor: Locate the end room, similar to how you locate a staircase. The end room contains a patched doorway, letting a little starlight enter the room.
- 9) Think Smart: A room on fire doesn't always mean the end of the game. Try to find ways around it, like parallel hallways.

The Rooms:

The current list of rooms (the asterisk (*) means that the room is immune to fire):

Start Room*

End Room*

Staircase Room*

Open Room (Single Entrance)

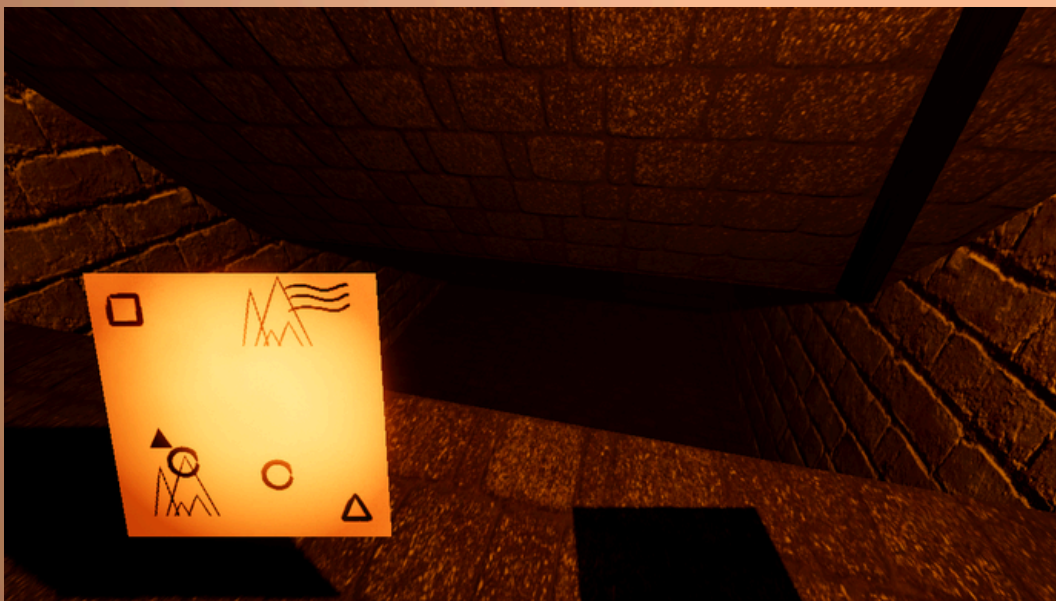

Double Entrance (Adjacent doorways)

Straight Room (Opposite doorways)

Triple Entrance (Three doorways)

Quadruple Entrance (Four doorways)

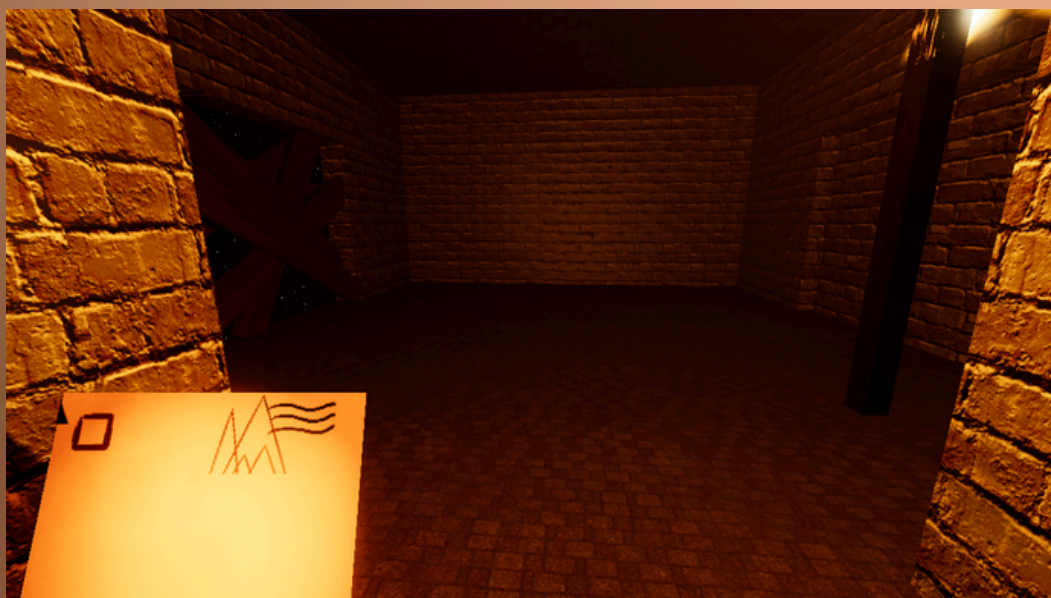

The Looks:

Staircase Room

Room on Fire

End Room
(With patched door on the
left side)
